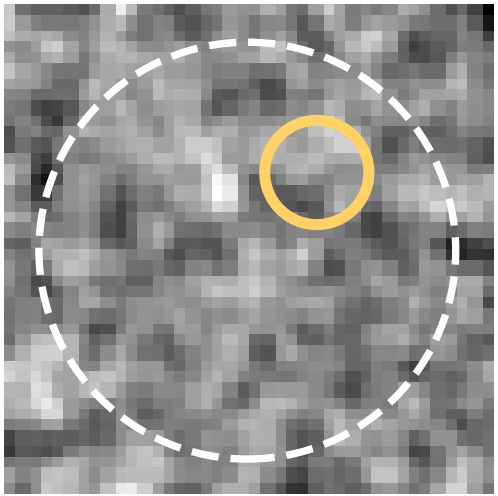
(a) small-ROI bias

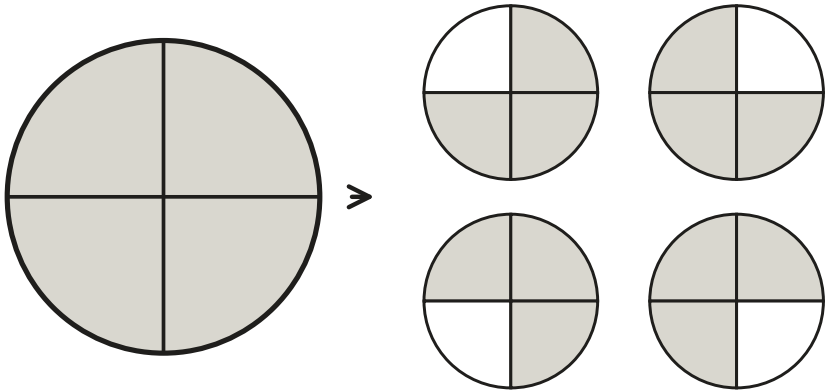


small ROI (123 voxels), real-CT entropy bias:

plug-in
−0.63 bits

jackknife
−0.01 bits

(b) block jackknife



ROI in $B = 8$ blocks

drop one, recompute, combine: cancels c/N

(c) reliability gate

ξ: correlation length measured in the ROI

$N/\xi^3 \geq 20$?

yes → **jackknife value**

no → **plug-in + "unreliable" flag**
